

MINISTERUL EDUCAȚIEI ȘI CERCETĂRII AL REPUBLICII MOLDOVA
Universitatea Tehnică a Moldovei

RAPORT

Lucrare de laborator nr. 3
la cursul „*Programarea de sistem și rețea*”

A efectuat:

St. gr. CR-221FR Serba Cristina

A verificat:

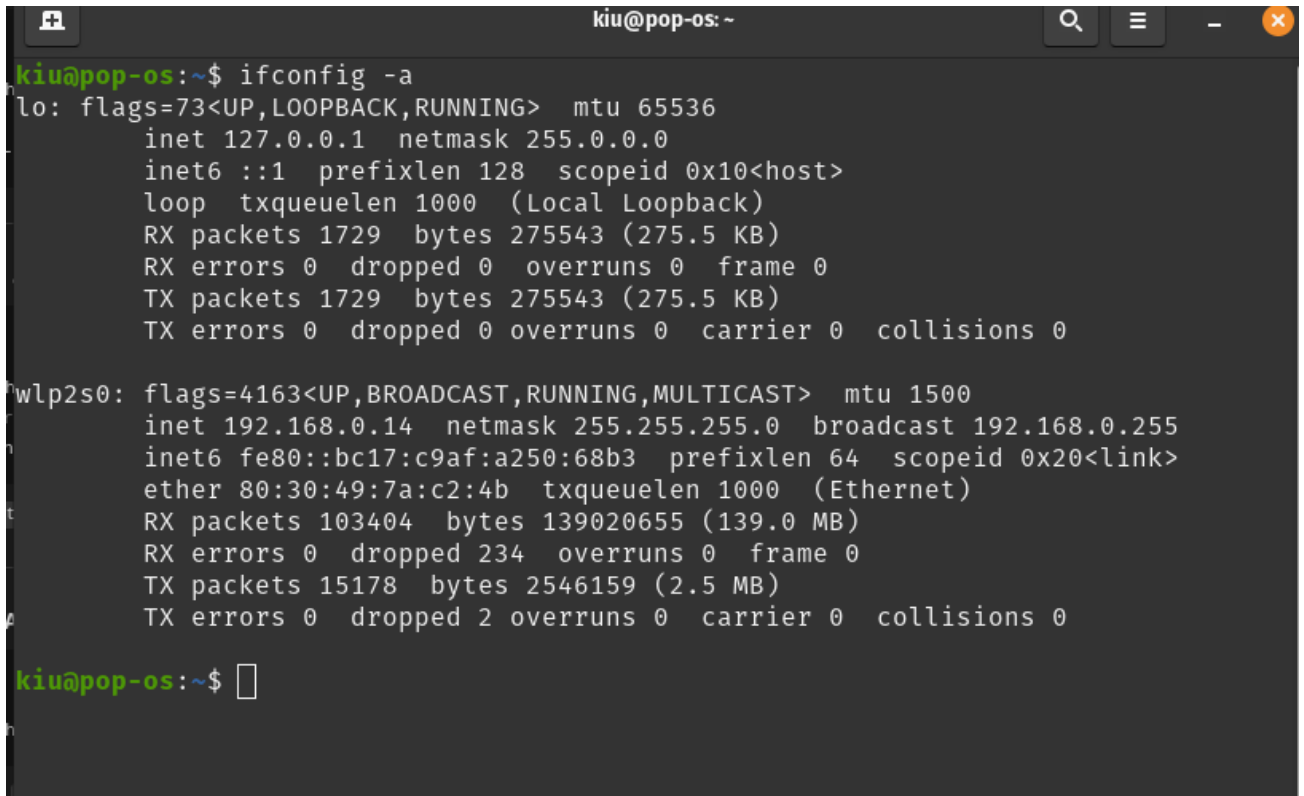

conf.univ. Victor Moraru

Chișinău 2025

Mersul lucrării:

Exercițiul 1. Studierea configurației de rețea

1. Lista interfețelor de rețea a mașinii virtuale (sau a calculatorului Dumneavoastră);

```
kiu@pop-os:~$ ifconfig -a

Exercițiul 2. Configurare de rețea avansată

1. Setezi configurarea de rețea în mod bridge (după cum e specificat mai sus).
2. Porniți mașina și afișați adresa IP a ei (ip addr show)
3. Testați conectivitatea cu hosturi pe internet (ping www.google.com sau ping 8.8.8.8).
4. De pe mașina gazda faceți un ping către adresa IP a mașinii virtuale pentru a va asigura de existența conectivității dintre ele

```

În paralel am testat conexiunea dintre mașina gazdă și cea virtuală folosind IP-ul aflat anterior.

Exercițiul 3. Comunicare securizată cu protocolul ssh

1. Conectați-vă de pe mașina gazda la mașina virtuala prin ssh la contul dumneavoastră folosind parola respectivă. Exact la fel poate fi deschisă o sesiune ssh de pe orice stație din rețea. Vedeți ce fișiere aveți pe mașina virtuala. Creați fișiere noi dacă nu aveți fișiere în contul Dumneavoastră.

Am creat test2.txt cu conținutul "test2 SSH" pe mașina gazdă apoi l-am copiat și afișat pe mașina virtuală.

Concluzii:

În cadrul lucrării am configurat conexiunea de rețea a mașinii virtuale, înțelegând diferența dintre modul NAT (care asigură acces la internet dar nu vizibilitate în rețeaua locală) și modul Bridge (care permite mașinii virtuale să primească o adresă IP în aceeași rețea cu gazda și să fie vizibilă din exterior). Am utilizat comenzile `ip addr`, `ping`, `ip route` și `traceroute` pentru a analiza configurația de rețea, a testa conectivitatea cu gazda, cu routerul și cu internetul.

Am lucrat cu protocolul SSH, instalând și configurând serverul `openssh-server`, după care am exersat conectarea securizată la mașina virtuală de pe gazdă. Am înțeles mecanismul de autentificare prin chei și importanța verificării identității gazdei. De asemenea, am folosit comenzile `scp` pentru copierea fișierelor între gazdă și mașina virtuală, testând atât transferul din VM către host, cât și invers.

În concluzie, exercițiul a oferit o imagine practică asupra modului în care se realizează configurarea rețelei, conectarea securizată și transferul de fișiere în Linux, competențe fundamentale pentru administrarea sistemelor și pentru lucrul în medii virtualizate.
